

Individual Data Profiles & Technical Assistance

The Association of Clinicians for the Underserved (ACU) has developed individual recruitment and retention profiles for each Health Center Program grantee and FQHC Look designed to serve as a self-evaluation tool. These profiles draw on a diverse collection of data sets and are designed to paint a picture of the workforce environment at each Health Center. By reviewing these data profiles and prompting self-evaluation by health centers of most need, the STAR² Center and ACU will offer national training and technical assistance initiatives.

Individualized Technical Assistance (TA) is available for Health Centers that would like to discuss their recruitment and retention challenges. Resources are also available for onsite TA, supported by STAR² Center funding and a consultant pool.
